

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) System for controlling vehicle-movement dynamics, which operates by means of the braking system and the drive train of a vehicle in order to prevent lateral breakaway of the vehicle, a braking moment being produced, by means of the braking system, on the front wheel on the outside of the bend, and an additional drive moment being built up, by means of the drive train, on the driven wheels, for the purpose of preventing oversteering of the vehicle, ~~characterized in that~~ wherein a higher-order or lower-order drive-slip control comes into action if the slip on one or more driven wheels exceeds a predetermined value due to the additionally built-up drive moment.
2. (Currently Amended) System according to Claim 1, ~~characterized in that~~ wherein the braking moment is first produced on the front wheel on the outside of the bend, and the additional drive moment is built up on the driven wheels only if the oversteer of the vehicle does not decrease after a predetermined period of time.
3. (Currently Amended) System according to ~~either of Claims 1 or 2,~~ Claim 1, ~~characterized in that~~ wherein the additional drive moment on the driven wheels is built up only when the braking moment produced on the front wheel on the outside of the bend has attained a predetermined value.
4. (Currently Amended) System according to ~~either of Claims 2 or 3,~~ Claim 2, ~~characterized in that~~ wherein the drive moment additionally built up on a driven wheel is of an order of magnitude which is half that of the braking moment previously produced on the front wheel on the outside of the bend.

5. (Currently Amended) System according to Claim 1, ~~characterized in that~~ wherein the additional drive moment is first built up on the driven wheels, and the braking moment is produced on the front wheel on the outside of the bend only if the oversteer of the vehicle does not decrease after a predetermined period of time.
6. (Currently Amended) System according to ~~either of Claims 1 or 5, characterized in that~~ Claim 1, wherein the braking moment produced on the front wheel on the outside of the bend is built up only when the additional drive moment on the driven wheels has attained a predetermined value.
7. (Currently Amended) System according to ~~either of Claims 5 or 6, characterized in that~~ Claim 6, wherein the braking moment produced on the front wheel on the outside of the bend is of an order of magnitude which is double that of the drive moment previously built up additionally on a driven wheel.
8. (Currently Amended) System according to ~~any one of Claims 1 to 7, characterized in that~~ Claim 1, wherein an additional braking moment is produced on the rear wheel on the outside of the bend when the additional drive moment is built up on the rear wheels.
9. (Currently Amended) System according to Claim 8, ~~characterized in that~~ wherein the braking moment additionally produced on the rear wheel on the outside of the bend is of an order of magnitude which is equal to that of the drive moment previously built up on the rear wheel on the inside of the bend.
10. (Currently Amended) System according to ~~either of Claims 8 or 9, characterized in that~~ Claim 8, wherein the additional braking moment is produced on the rear wheel on the outside of the bend only if the oversteer of the vehicle does not decrease after a predetermined period of time.

11. (Currently Amended) System according to ~~any one of Claims 8 to 10, characterized in that~~ Claim 8, wherein the additional braking moment is produced on the rear wheel on the outside of the bend only when the drive moment produced on the rear wheel on the outside of the bend has attained a predetermined value.
